

LASER – POWDER BED FUSION

Fusing Ideas into Solutions

Elmet Technologies is leading the quickly evolving field of metal additive manufacturing (AM), combining our competencies in 3D printing technologies with 100 years of expertise in refractory metals.

The Laser - Powder Bed Fusion (L-PBF) is the most well known AM method for producing metal parts. During the process, spherical metal powders are spread in layers while a laser is used to melt and fuse the layers to create unique part shapes. Development of suitable powders and printing parameters enables Elmet Technologies to supply refractory metal parts into a wide range of applications.

Powder bed fusion allows for the production of full density parts, while maintaining highest design accuracy. It is a preferred option for materials that can be used in an as-welded condition. Tight tolerances and a smooth printed surface finish make it the method of choice for highly complex shapes.

With our flexible manufacturing capabilities, we are able to offer fast deliveries of small quantities and work with our customers to not only print their existing parts, but also discuss re-design opportunities to take full advantage of the benefits of AM.

Material

Spherical refractory
metal powder

Method

Powder Bed Fusion

Application/Market

Pump impeller for
the Chemical
Processing industry

ADDITIVE MANUFACTURING CAPABILITIES

Elmet Technologies utilizes the benefits of powder bed fusion to dramatically enhance part performance. Working closely with our customers, we select the correct materials and manufacturing strategy, maximizing the value to any given application.

LASER - POWDER BED FUSION PROCESS CAPABILITIES	
Overall Build Size	285 x 248 x 248 mm
Minimum Feature Size	150 µm
Typical Dimensional Tolerance	± 1% with a minimum tolerance of ± 0.05 mm
Typical Density	> 98% of theoretical
Current Materials	Pure Ta, Pure Mo, Mo-Re alloys and Nb alloys

Potential Applications

- > Heat exchangers
- > Rocket nozzles
- > Biomedical implants
- > Collimators
- > Pump impellers
- > Defense parts
- > Valve components
- > Heat shields
- > Light-weight structures

What We Provide

- > Tailored AM powder for powder bed fusion
- > Laser parameter development and optimization
- > Powder bed fusion part printing in custom materials
- > Post-processing and heat treatment
- > Volumes from prototype range to production scale
